 June 2006, For Immediate Use

New *AutoMotionPLUS*™ Rel. 3.0 Digital Drive Software

Ann Arbor, MI. . Automotion, Inc. is pleased to announce the availability of our new *AutoMotionPLUS*™ Rev. 3.0 digital servo drive utility software. The new Rel. 3.0 *AutoMotionPLUS*™ digital servo drive program is a Windows® compatible set-up and tuning utility program developed specifically to support Automotion’s growing family of all-digital brushless servo drives.

New features in this latest update include:

- 1) Expanded Motor Set-up Wizard for use in proper motor phasing and set-up of encoder feedback.
- 2) New master Current, Velocity, and Position Tuning icons that combine a full featured function generator, graphing, and slide bar tuning parameter selection, all in one screen for faster, easier servo loop tuning.
- 3) A new I/O Configuration feature, that lets you choose your analog of PWM input command, and automatically scale it to the desired output of your servo-amplifier, in amps, RPM’s encoder counts, etc.
- 4) Understandable, easy to use graphical set-up menus and tables, which can be displayed in User Units, such as RPM, RPS, Rad/sec, etc. let you see exactly how your servo system is responding in real time to your adjustments in external load and control loop parameters.
