**DMI TECHNOLOGY CORPORATION
COMPLETES THE ACQUISITION OF AUTOMOTION, INC.**

DOVER, NH, USA (May 1, 2009) – DMI Technology Corporation has acquired the operating assets of Automotion, a global manufacturer of brushless AC and DC motion control technology, specializing in embedded industrial OEM servo applications. The Automotion product line will be incorporated into the ElectroCraft Inc. (the DMI Technology motor and motion portfolio company) family of motor and motion products, worldwide.

“Automotion primarily serves OEM machine builders, with a focus on embedded OEM servo solutions designed specifically for the customer which integrate directly into their machines,” according to Jim Elsner, President and CEO for ElectroCraft. “The addition of this drive technology, coupled with the ElectroCraft legacy of reliable, custom manufactured motor products creates a unique capability in the marketplace. ElectroCraft now has the ability to provide customers complete, feature-rich standard servo systems or take ownership responsibility for a completely customized motor and drive solution in those applications where standard product features, product performance or price points simply do not work,” said Elsner.

Additionally, the acquisition of the Automotion digital servo technology platforms will augment the existing ElectroCraft analog based servo products and extend their product range for those customers looking for the performance, set-up and diagnostic benefits of digital drive technology. According to Elsner, “the technology and engineering capabilities of Automotion will allow ElectroCraft to provide our customers with a more comprehensive and globally competitive offering of motor and drive solutions.”

About ElectroCraft

ElectroCraft, Inc. is a global provider of fractional-horsepower motor and motion control solutions for both industrial and commercial applications. The company specializes in dependable, application-engineered specialty products by utilizing its Lean business philosophy to consistently meet the needs of its customers worldwide. The company’s products are found in pumps, office equipment, medical devices, aircraft and thousands of other applications. ElectroCraft is headquartered in Dover, New Hampshire with operations in the United States, Europe, and Asia.
